Hot Foil - clear, clean and versatile

The Coder 60 printhead

The easy-load Coder 60 magazine

Standard frame

The Technology

Hot Foil remains a key technology for overprinting in the packaging industry, due to its many advantages, namely:

- Unrivalled print quality
- High speed capabilities
- Odourless, non-toxic and smudge free
- Completely clean and instantly dry
- Excellent abrasion resistance
- Excellent adhesion to packaging materials
- Low capital investment
- Low long-term cost of ownership

The Rotech Coder 60

Its many features are tailored to maximise quality and efficiency.

- Quick-change foil magazine
- Wide range of type systems including flickwheel
- Unique foil indexing mechanism for maximum foil economy
- Foil run-out and foil-break warning
- Print area up to 60 x 20mm
- Print speed up to 600 prints per minute

Integration onto existing packaging machines is facilitated by the use of both standard and custom designed frames.

System Pack - pre-wired for ease of installation

Custom frame detail

Comprehensive range of typeholders

Both mechanical pin and ball & spring rotary typeholders are available

The Coder 60 coder kit is designed to facilitate easy installation on a wide range of packaging machines whilst maintaining maximum performance. All controls are housed in either the coder or a single "System Pack" that doubles as a connection centre and is supplied pre-wired for mains and coder connection.

To offer maximum flexibility and security the coder is available with a range of optional items such as a print delay module, low temperature inhibit system and a low air pressure alarm.

Rotech's wealth of installation experience permits machine surveys to be performed during an initial sales visit, saving on cost and reducing lead-times.

Rotech offer a comprehensive range of type and typeholders to suite all brands of coder together with ex-stock supplies of hot foil type.

The Coder 60 can also be fitted to the Rotech Semi 60 and Feeder 150 for off-line applications.
